

AMAZON CONTENT FOR BANIJAY – 06/01/2023

Please use: BANIJAY RIGHTS Client in QC System
Required: Picture and 10CH In-Depth Broadcast QC.

Please treat this as an in-depth broadcast picture and audio QC to Banijay Rights Spec. We will adhere to Amazon content guidelines as per below.

Please log all types of picture, video and audio faults: If required, please add screenshots of faults.

NOTE: Files are not to Amazon Original spec: / Spec may change title to title, this will be updated

In the location on the network there are:

One HDR 10 mov file – For QC.

One Metadata Document (txt)– For MaxCLL requirements

One PSE Report (PDF).

One QC eye report (PDF) for reference and to add to our QC report creation.

We are not doing an Amazon QC as we aren't approved for this. Amazon have advised that they will be performing a full QC themselves on delivery. We therefore need to do an in-depth Broadcast QC to stop anything that might be flagged when they do their QC.

Please use the EYE Reports provided in the network location for reference and take across log faults required to your QC report.

Please also check the Metadata doc for type of HDR and MaxCLL.

We will also consider Amazon content guidelines as per the link provided.
